

Introduction to AI and AI on Azure

Agenda

- Introduction to AI
- AI on Azure
- Get started with Azure AI services
- Using Azure AI Services for enterprise applications

Introduction to AI and Azure AI services

Learning Objectives

After completing this module, you will be able to:

- 1** Describe artificial intelligence and how it compares to machine learning and data science.
- 2** Describe Azure AI services.

What is Artificial Intelligence?

Software that exhibits human-like capabilities, such as:

Visual Perception

Text Analysis

Conversation

Decision Making

Data Science, Machine Learning, and AI

Artificial Intelligence
Intelligent software apps and agents

Machine Learning
Use of data and algorithms to train predictive models

Data Science
Application of mathematical and statistical techniques to analyze data

AI for Software Engineers

Software Development Skills

- Coding (C#, Python, Node.js, ...)
- Consuming APIs (REST or SDKs)
- DevOps (source control, CI/CD)

Conceptual AI Understanding

- Model training and inferencing
- Probability and confidence scores
- Responsible AI and ethics

Considerations for Responsible AI

Fairness

Reliability & Safety

Privacy & Security

Inclusiveness

Transparency

Accountability

<https://www.microsoft.com/ai/responsible-ai>

Azure Machine Learning

Cloud platform for creating and operating machine learning solutions

Azure AI Services

Prepackaged AI services you can integrate into solutions

Capabilities include:

Language	Speech	Vision	Generative
<ul style="list-style-type: none">• Text analysis• Question answering• Language understanding• Translation	<ul style="list-style-type: none">• Speech recognition• Speech synthesis• Speech Translation• Speaker Recognition	<ul style="list-style-type: none">• Image and video analysis• Image classification• Object detection• Optical character recognition	<ul style="list-style-type: none">• Generate text completions• Image generation

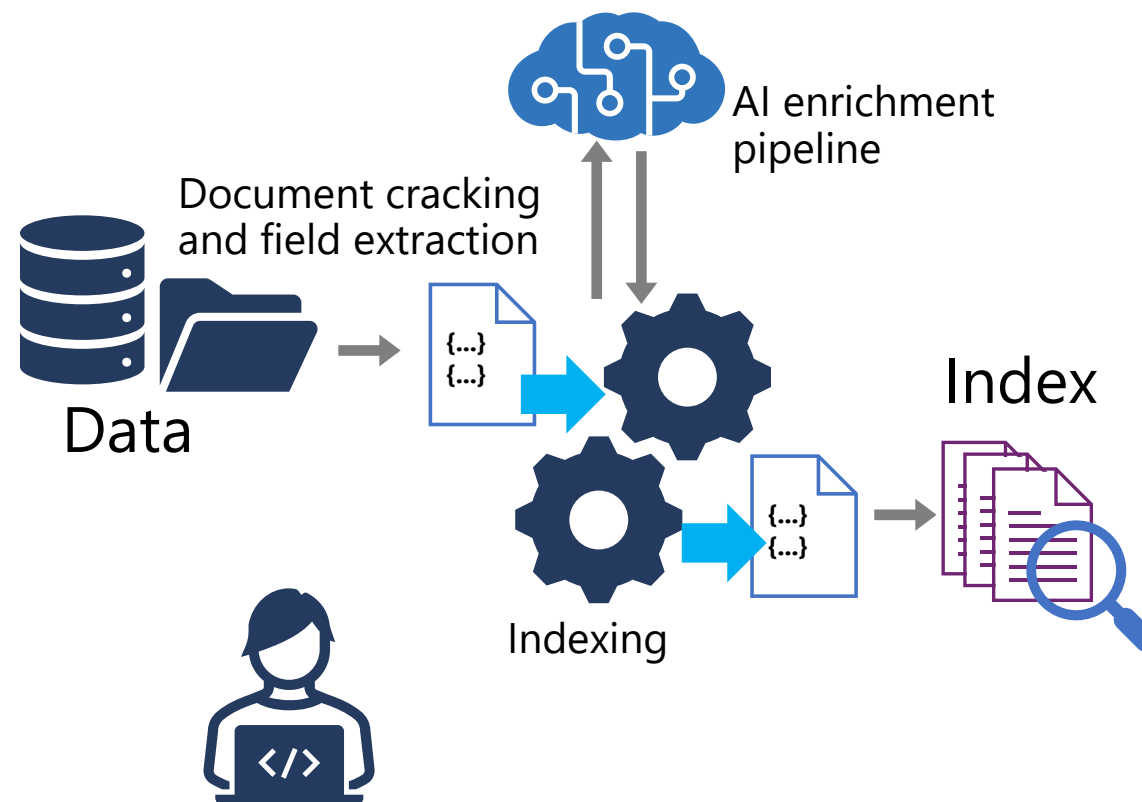

Azure AI Services

- Azure AI Document Intelligence
- Azure AI Language
- Azure AI Vision
- Azure OpenAI
- Azure AI Search

Azure AI Search

AI-enriched indexing for search and knowledge mining

Knowledge check

- 1** Which of the following best describes the predictions made by a machine learning model?
 - ☐ Absolutely correct values based on conditional logic.
 - ☐ Randomly selected values with an equal chance of selection.
 - ☒ Probabilistic values based on correlations found in training data.

- 2** A data scientist has used Azure Machine Learning to train a machine learning model. How can you use the model in your application?
 - ☒ Use Azure Machine Learning to publish the model as a web service.
 - ☐ Export the model as an Azure AI service.
 - ☐ You must build your application using the Azure Machine Learning designer.

- 3** You want to index a collection of text documents, and search them from a mobile application. Which service should you use to create the index.
 - ☐ Azure AI Language
 - ☒ Azure AI Search
 - ☐ Azure AI Speech

Get Started with Azure AI services

Learning Objectives

After completing this module, you will be able to:

- 1 Understand Azure AI APIs.
- 2 Create and consume Azure AI services resources.

Provisioning Azure AI Services resources

Create a resource in your Azure subscription

- You will create either a *single-service* resource or a *multi-service* resource:
- Multi-service resource (**Azure AI Services**):
 - Access multiple Azure AI Services with a single key and endpoint.
 - Consolidates billing from the services you use.
- Single-service resource (for example, **Language**):
 - Access a single Azure AI service with a unique key and endpoint for each service created.
 - Use the free tier to try out the service.

Create Azure AI services

Responsible AI Notice

Microsoft provides technical documentation regarding the appropriate operation applicable to this Azure AI service that is made available by Microsoft. Customer acknowledges and agrees that they have reviewed this documentation and will use this service in accordance with it. This Azure AI services is intended to process Customer Data that includes Biometric Data (as may be further described in product documentation) that Customer may incorporate into its own systems used for personal identification or other purposes. Customer acknowledges and agrees that it is responsible for complying

Endpoints, Keys, and Locations

Information required to connect

Endpoint:

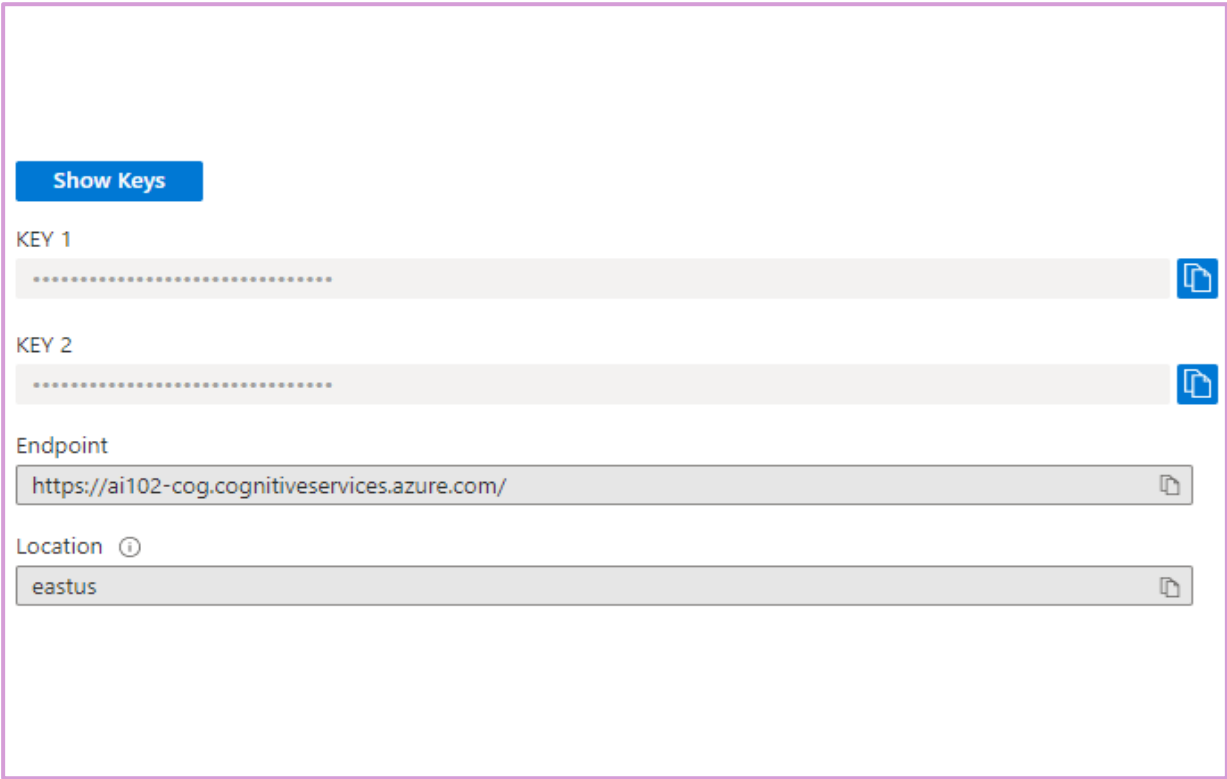

- URL at which service can be consumed
- Required by *most* SDK clients

Keys:

- Use *either* key to authenticate

Location:

- Azure data center in which resource is provisioned
- Required by *some* SDK clients

The screenshot displays the configuration details for an Azure Cognitive Services resource. At the top, there is a blue button labeled "Show Keys". Below this, two keys are listed: "KEY 1" and "KEY 2". Each key is represented by a grey bar with a series of dots, indicating a masked value, and a blue copy icon to its right. Underneath the keys, the "Endpoint" is shown as a text input field containing the URL "https://ai102-cog.cognitiveservices.azure.com/", with a copy icon to its right. Finally, the "Location" is shown as a text input field containing the value "eastus", with an information icon (i) to its left and a copy icon to its right.

Field	Value
KEY 1
KEY 2
Endpoint	https://ai102-cog.cognitiveservices.azure.com/
Location ⓘ	eastus

Azure AI Services REST APIs

Clients submit HTTP requests to the resource endpoint

- Key specified in request header
- Input data in JSON format
- Specific schema varies by service and method

Service returns JSON response

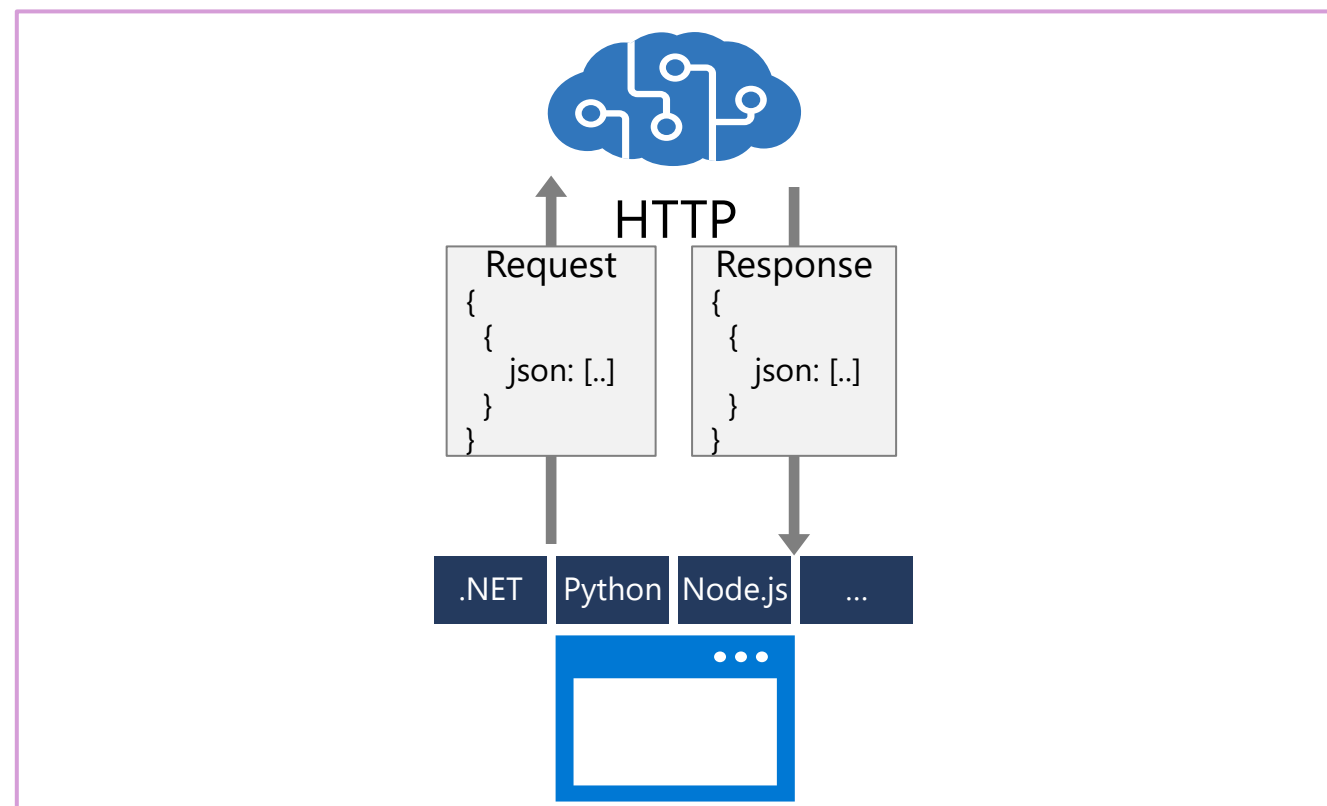

Azure AI Services SDKs

Runtime library abstracts REST interface

Multiple SDKs for each service:

- .NET
- Python
- Node.js
- Java
- Others...

Exercise – Get Started with Azure AI Services

Provision an Azure AI Services resource

Use a REST interface

Use an SDK

Using Azure AI Services for enterprise applications

Learning Objectives

After completing this module, you will be able to:

- 1 Consider and manage authentication and network security for Azure AI services.
- 2 Manage costs, view metrics, and manage alerts and diagnostic logging.
- 3 Deploy to secure containers and consume Azure AI services from containers.

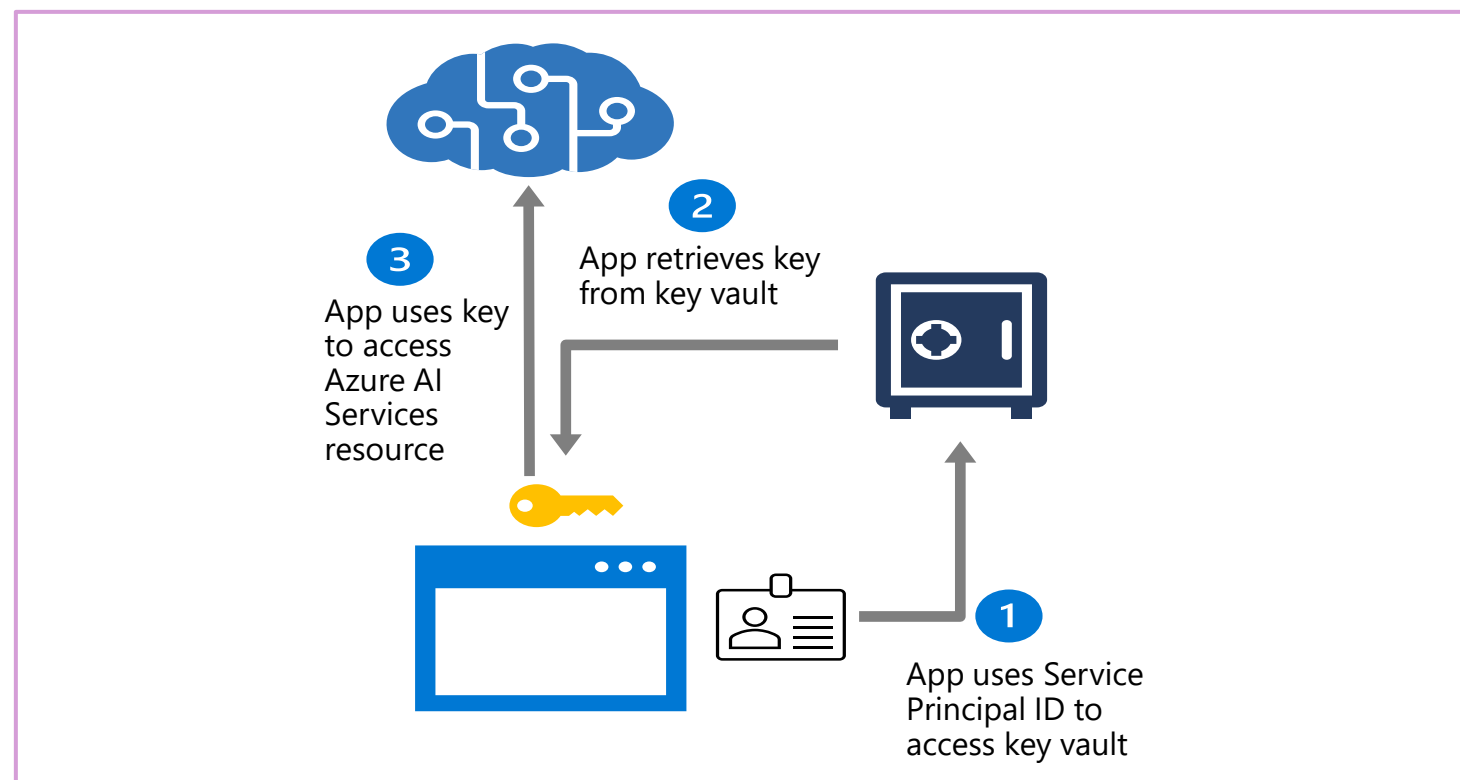

Considerations for Azure AI Services security

Regenerate keys regularly to protect access

- To avoid service interruption, switch apps to use key 2 before regenerating key 1; and vice-versa

Consider protecting keys by storing them in Azure Key Vault

- Apps can use a Service Principal as a managed identity to retrieve keys from Key Vault

[Optional] Exercise – Manage Azure AI Services security

Manage Authorization Keys

Secure Key Access with Azure KeyVault

Monitoring Azure AI Services Activity

Alerts

- Alerts will ensure that the correct team knows when a problem arises.
- Every alert or notification available in Azure Monitor is the product of a rule

Metrics

- Metrics are numerical values
- The metrics are collected at regular intervals and are useful for alerting.
- Metrics are stored in a time-series database.

Diagnostic settings

- Configure diagnostic settings is to provide detailed information for diagnostics and auditing.
- Diagnostic Destinations:
 - Log Analytics Workspace
 - Event Hubs
 - Azure Storage

Logs

- Logs contain time-stamped information about changes made to resources.
- The log data is organized into record
- The logs can include numeric values, but most include text data
- The most common type of log entry records an event

[Optional] Exercise – Monitor Azure AI Services

Configure an alert

Visualize a metric

Azure AI Services and Containers

Container images are available for commonly used Azure AI services APIs

- Deploy containers to:
- Local Docker hosts
- Azure Container Instances
- Azure Kubernetes Services clusters
- others...

Enables more control over data sent to public Azure AI service endpoint

- An Azure AI services resource is still required, and the container must communicate with it to send billing data

Extended interactive exercises – Use an Azure AI Services container

<https://aka.ms/ai-services-lp>

Knowledge check

- 1 How are client applications typically granted access to an Azure AI services endpoint?**
 - ☒ The application must specify a valid subscription key for the Azure resource.
 - ☐ The user of the application must enter a user name and password associated with the Azure subscription.
 - ☐ Access to Azure AI services is granted to anonymous users by default.

- 2 You want to keep track of how often the subscription keys for your Azure AI services resource are retrieved. What should you do?**
 - ☐ Regenerate the keys for your Azure AI services resource.
 - ☒ Create an alert for your Azure AI services resource.
 - ☐ Store the keys in Azure Key Vault.

- 3 You plan to use an Azure AI services container in a local Docker host. Which of the following is true?**
 - ☐ Client applications must pass a subscription key to the Azure resource endpoint before using the container.
 - ☐ All data passed from the client application to the container is forwarded to the Azure resource endpoint.
 - ☒ The container must be able to connect to the Azure resource endpoint to send usage data for billing.

Learning Path Recap

In this learning path, we:

Described artificial intelligence and how it compares to machine learning and data science.

Described Azure AI services.

Understood how to get started with Azure AI services

Understood how to use Azure AI Services for enterprise applications
